Accessories are Convenient for Resting Utensils
and Cookware**

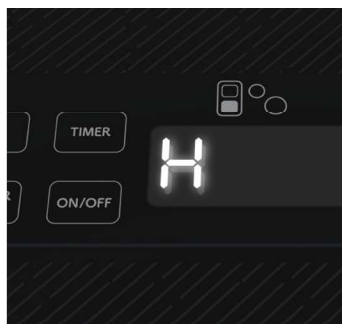

DESIGNED FOR YOUR DREAM KITCHEN

The Sharp® SCH2443GB Induction Cooktop is a powerful, beautiful addition to your dream kitchen. The black mirror finish of the glass surface is a perfect match and can be combined with our Easy Wave Open Microwave Drawer™ Oven and our 24 in. European Convection Built-In Single Wall Oven.

The four cooking zones provide flexibility to orchestrate even your most elaborate entertaining. The SCH2443GB features a variable-sized zone. More precise than gas, more energy efficient than radiant electric, the Sharp Induction Cooktop is faster than both. There is a kitchen timer, and even a Power Boost setting for those times when you just need that pasta water to boil quickly. The Simmer, Melt, and Warm settings provide low, consistent cooking performance for your most delicate soups, sauces, and fondues. Heat is generated directly into the cookware itself, so there is less wasted energy. And without an open flame or radiant coil, spills and splatters are less likely to burn, and a breeze to clean up.

The SCH2443GB has advanced safety features. All of the cooktop controls can be locked-down. Cookware must be present for a cooking zone to turn on, so you won't accidentally turn it on, or leave it on after you remove the pan. Each cooking zone has a dedicated timer to turn off the cooking zone after 99 minutes of use.

Powerful and efficient, fast and flexible, the beautiful Sharp SCH2443GB Induction Cooktop is certainly Simply Better Living.

The residual heat indicator lets you know if a cooking zone is still hot.

The SCH2443GB offers a bridge element for oblong pans and longer cookware.

Simmer Enhancer precisely holds the temperature for extraordinarily consistent simmering.

Bright white LED controls make the touch glass clear and easy to read.
